From: Sent:

Nickol, Gary Friday, June 13, 2003 3:56 PM STIC-Biotech/ChemLib

To:

Subject:

09/513365

Please search the following:

1) DNA of SEQ ID NO:2 2) DNA encoding the amino acids of SEQ ID NO:1

Thanks,

Gary Nickol CM1, AU:1642 Room 8D17, Mailbox 8E12 (703) 305-7143

Full-length enriched library was constructed using the Clontech Creator SMART kit and size-selected to contain the 1-2 kb size fraction (other fractions present in NHH_MGC_126 and NHH_MGC_128). Library created in the laboratory of T. Usdin, M.D., Ph.D. (NIMH, NIH). Note: this is a NIH_MGC Library."

First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT/T3-Pac vector. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT/T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes, AGAATCAAGA; lens, CGATTAAGGG; eye anterior segment, AATGCCGCAT; optic nerve, CCATTAAGTG; retina, CCGCG; Retina Foveal and Macular, GTCC; RPE and Chorold, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI).*
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          note-"Organ: eye; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; UI-E-EJI is a subtracted cDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research,

UI-E-EJ1 is a subtracted cDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               msoares@blue.weeg.uiowa.edu

polylinker; Site_1: Not I; Site_2: Eco RI; The UI-R-C1
library is a subtracted library derived from the UI-R-C0
library, which is a subtracted library derived from the
UI-R-A1 and UI-R-E1 libraries. The UI-R-A1 library
consisted of a mixture of individually tagged normalized
libraries constructed from rat placenta, adult lung,
brain, liver, kidney, heart, spleen, ovary, and muscle.
The UI-R-E1 library consisted of a mixture of
individually tagged normalized libraries constructed from
8, 12 and 18-day embryo. The tag is a string of 3-5
nucleotides present between the Not I site and the
oligo-dT track which allows identification of the library
of origin of a clone within the mixture. The subtracted
library (UI-R-C1) was constructed as follows: PCR
amplified cDNA inserts from UI-R-C0 clones from which 3'

                                      ESTs had been derived was used as a driver in a hybridization with the UI-R-CO library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-C1 library. This procedure has been previously described and start of the control of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /clone="UI-R-C1-lc-d-10-0-UI"

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    length: 0

TSC403 is useful in the diagnosis, investigation and treatment of cancers in which it is overexpressed, including cancer of the lung, breast, fallopian tube, oesophagus, colon, thyroid, parotid gland, bladder, ovary or pancreas. INGIL is useful in the investigation of cell proliferation, aging and apoptosis and the pathology of cancer, the diagnosis and treatment of cancer such as cancer of the colon, stomach, oesophagus or fallopian tube, and the screening of candidate drugs for the treatment of such cancers.

The present invention also describes the human gene TSC403 expressed specifically in normal lung tissue. TSC403 is useful in the diagnosis, investigation and treatment of cancers in which it is overexpressed, including cancer of the lung, breast, fallopian tube, oesophagus, colon, thyroid, parotid gland, bladder, ovary or pancreas. INGIL 18 useful in the investigation of cell proliferation, aging and apoptosis and the pathology of cancer, the diagnosis and treatment of cancer such as cancer of the colon, stomach, oesophagus or fallopian tube, and the screening of candidate drugs for the treatment of such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1078

                                                                                                            The present sequence is a DNA encoding tumour suppressor homologue protein, p33ING2 which is homologous to human tumour suppressor prop47ING3. The tumour suppressors of the invention are involved in the regulation of cell proliferation and in the control of cellular agi anchorage dependence and apoptosis. The tumour suppressor protein, p47ING3, nucleic acids encoding it and antibodies against it are us for diagnosis, prevention and treatment of tumours and cancers. The p47ING3 DNA is also used in gene therapy.

The protein sequence was identified from a human lung cDNA library. The protein sequence was identified from a human lung cDNA library. The protein sequence was identified from a human lung cDNA library. The protein sequence contains a contain contain contain contain contain protein kinase c phosphorylation sites, five potential casein kinase phosphorylation sites, and one potential tyrosine kinase phosphorylation site. TUSUP has structural and chemical similarity to p33. TUSUP can be used to treat or prevent cancer, particularly of the reproductive or gastrointestinal tracts or of the immune system. Agonists of the TUSUP protein can be used to raise TUSUP specific antibodies and to screen for specific binding agents and potential therapeutic agents. The TUSUP nucleotide sequence can be used in gene therapy and as a source of diagnostic probes and primers.

CC remains unknown but p53 has been found to act in cooperation with CC ING1. Functional cooperation between ING1 and p53 suggested that CC ING1 encoded a tumour suppressor protein that functioned within the CC ING1 encoded a tumour suppressor protein that functioned within the CC Expanding of the ingline and chromosomal location of the ING1 placed it CC within a region that is frequently rearranged in head and neck cancers and chromosomal location of the ING1 placed it CC expression suggesting that ING1 was not a useful gene to study in CC expression suggesting that ING1 was not a useful gene to study in CC expression of one promoter (la) produces a protein identical to CC Expression of a second promoter (la) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having CC expression of a second promoter (lb) produces a protein having cancers in the sequence of expressing the conclusion of the sequence of expressing the conclusion of the sequence of expressing the conclusion of the sequence of the polymental produces and the conclusion and the conclusion and the conclusion of the sequence of the polyment of ccll conclusions and the conclusion and the conclusion and the conclusion and the conclusion and c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detecting nucleic acid encoding exon 1b of ing1, useful for diagnosing and treating cancer, comprises contacting sample with isolated nucleic acid comprising sequence of exon 1b and detecting hybridized products

CC p53 pathway. This data suggested a possible role for ING1 head and neck cancers and chromosomal location of the ING1 placed it CC within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not CC revealed mutations in ING1 nor significant variations in its CC expression suggesting that ING1 was not a useful gene to study in CC expression of one promoter (la) produces a protein identical to CC Expression of one promoter (la) produces a protein identical to CC Expression of a second promoter (1b) produces a protein having the involving ING1 has been CC ING1. Expression of a second promoter (1b) produces a protein having CC ING1. Expression of a second promoter (1b) produces a protein having CC ING1 Expression of a second promoter (1b) produces a protein having CC ING1 Expression of a second promoter (1b) produces a protein having CC ING1 matched p37ING1 (Wild type: p33ING1). p37ING1 has the CC ING1 Expressing wild type: p33ING1). p37ING1 has the CC ING2 expressing wild type: p33ING1). p37ING1 is able to cause CC ING2 expressing the sequence of exon 1b of ing1 by hybridisation with an CC isolated nucleic acid having the sequence of exon 1b of ing1 can also be used to raise antibodies that can also be used to raise antibodies CC ING2 expressing the useful in gene therapy for treatment of cell concipied of p37ING1 can also be used to raise antibodies contained and isorders, especially cancers and for diagnosing and certained contained and certained concipied and solutions, especially cancers and for diagnosing and certained contained to cancers and contained concipied contained contained to cancers and contained cont

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated cancer associated nucleic acid molecule identified by SE (serological identification of antigens by recombinant expression cloning) technique, useful in nucleic acid based therapies to treasurer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes a human cancer associated antigen. The sequence is a variant of the ING1 gene, which is a tumour The sequence is a variant of the ING1 gene, which is a tumour suppressor gene candidate. The cancer associated antigen polynucleotides and polypeptides are useful for screening for the possible presence of a pathological condition in a subject such as cancer. The cancer associated antigen polypeptides are useful for producing vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1533

cc combination, to specifically recognise epitopes of ING1 (inhibitor of CC growth 1) protein isoforms. ING1 is a tumour suppressor gene and its CC expression is regulated through the cell cycle, peaking in the S phase. CC malignancies. Overexpression of a construct containing the ING1 gene is CC able to inhibit cell growth by reducing the fraction of cells which enter CC into the S phase. The monoclonal antibodies are useful for detecting an CC ING1 protein in a cell, which involves selecting a cell that ectopically CC or endogenously expresses ING1 protein. The anti-ING1 monoclonal antibody consists of two or more antibodies of CAb1-CAb10 (not consists of two or more antibodies are also useful for diagnosing a disease e.g. tumour or medical condition in an animal C (preferably, human) associated with aberrant levels of an ING1 protein.

In cc many cases the mechanism of functional inactivation of the p53 gene CC remains unknown but p53 has been found to act in cooperation with CC ING1 Functional cooperation between ING1 and p53 suggested that CC ING1 encoded a tumour suppressor protein that functioned within the CC p53 pathway. This data suggested a possible role for ING1 in head CC and neck cancers and chromosomal location of the ING1 placed it CC within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not revealed mutations in ING1 nor significant variations in its cancer etiology. However, alternative initiation exons of the ing1 CC cancer etiology. However, alternative initiation exons of the ing1 CC cancer etiology. However, alternative initiation exons of the ing1 CC cancer etiology. However, alternative initiation exons of the ing1 CC cancer etiology.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Вp
          A partial cDNA clone (AAT69651), designated ING1, codes for a tumour suppressor protein p33ING1 (AAW19118) that is a potent inhibitor of cell growth. It was isolated by subtractive hybridisation between normal mammary and transformed epithelia cDNAs, isolation of an antisense ING1 cDNA insert that caused increased cell proliferation, and use of the insert to screen normal human fibroblast and HeLa cDNA libraries. A complete I sequence (AAT69652) was obtd. by 5'RACE. ING1 is localised to 13933-34 chromosome region, to which a number of human cancers been marked.
                                                                                                                                                                                                                   Isolated tumour suppressor gene, ifor inhibiting or increasing cell treatment or diagnosis of cancer
                                                                                                                                                                                     Claim 1; Fig 2; 63pp;

                                                                                                                                                                                                                                                                                                                                               CC performed with cDNA from normal mammary epithelial cells, and CC subtracted cDNAs were cloned into retrovirus vector pLNCX. Following passage through a packaging line, normal mouse mammary completed cells were injected, and infected cells were injected cells were injected cells were injected cells were injected completed into nude mice. Putative transforming fragments from tumours were completed into nude mice. Putative transforming fragments from tumours were completed by PCR (see AAV62290-91) and subcloned into LNCX. An ING1 cragment was obtained and used to screen normal human fibroblast cell cDNA libraries. 2 Clones were sequenced to obtain cell partial ING1 sequence. The complete cDNA sequence (see CAV62292) was obtained by RACE. A claimed method to potentiate capoptosis in a eukaryotic cell involves administering an active complete encoding such as a peptide. CC alaimed method for inhibiting apoptosis in a eukaryotic cell completed. Also claimed completed and method for determining the apoptotic characteristics of a cell are a method for determining the apoptotic characteristics of a cell substantially free of p33ING1 biological activity. The invention cold sections in Inderivatives or variants that may be used to induce

ING1 is a new gene that is expressed in normal mammary epithelial cells, but which is expressed only at lower levels in several cancerous mammary epithelial cell lines and is not expressed in many primary brain tumours. To isolate ING1, a subtractive hybridisation of breast cancer cell lines cDNAs was subtractive hybridisation of breast cancer cell line cDNAs was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Modulating eukaryotic apoptosis by increasing p33ING1 activity using p33ING1 derivatives, to induce apoptosis in cancer cells, in the investigation of apoptotic pathways
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 1998-542700/46
